Karnal, India

Summary

Cross-platform systems engineer with 4 years of experience building scalable mobile and web applications using Flutter and backend technologies. I've worked on SaaS platforms, automation systems, and real-world deployments including an insurance CRM and civic-tech applications.

My focus is on building clean architecture, improving performance, and reducing development effort through reusable systems and automation. I enjoy working in fast-paced environments where I can take ownership of features and deliver production-ready solutions.

Skills

Core Development

Flutter, Dart, BLoC, Cross-Platform Architecture (Android/iOS/Web).

Web Technologies

Next.js, Tailwind CSS, Responsive Design, REST APIs

Tools & Concepts

Git, Figma, System Design, Problem Analysis, Agile, Scrum, Jira.

Backend, AI & Infrastructure

Express.js, Python (FastAPI, Flask), TensorFlow, PyTorch, Docker, Automation Scripting, MongoDB, BunnyCDN.

Certificates

- Software Engineer Certification – HackerRank
- Full-Stack Web Development – University of London (Coursera)
- Generative AI Automation – Vanderbilt University (Coursera)
- Certified Ethical Hacker (CEH) – Pearson (Coursera)
- Google IT Automation with Python – Google (Coursera)
- Machine Learning Operations – Duke University (Coursera)

Key Achievements

Flutter Design System

Created a reusable Flutter design system that improved UI consistency and reduced development effort across multiple projects.

End-to-End MLOps Pipeline

Built an end-to-end MLOps pipeline to automate data processing, model training, and deployment workflows

Hindi-English NLP Model (91% Accuracy)

Developed a Hindi-English POS Tagging model with 91% accuracy using machine learning techniques such as SVM and TF-IDF.

Education

Mangalayatan University, Bachelor of Computer Applications

07/2025 – Present | Karnal, India

Professional Experience

Senior Flutter Developer, TechVoyageLab

01/2025 – 05/2026 | Karnal, India

- Developed cross-platform web and mobile applications using a single codebase, helping reduce development time and improve maintainability.
- Built and delivered a SaaS-based General Insurance CRM application, handling state management with BloC and implementing dynamic forms for customer and agent workflows.
- Worked with Municipal Corporation Karnal on civic-tech projects, including a waste management awareness application designed to improve citizen engagement.
- Followed clean architecture and modular coding practices, while helping team members with Git workflows, code organization, and performance optimization.

Flutter Developer, Articulate Solution

07/2022 – 12/2024 | Karnal, India

- Built and maintained mobile applications using Flutter and Dart, with a focus on API integration and data management.
- Optimized application performance by identifying memory bottlenecks and improving rendering logic to ensure smooth 60fps animations.
- Converted Figma designs into responsive and reusable Flutter widgets while maintaining design consistency across screens.
- Resolved critical bugs, supported existing codebases, and contributed to improving application stability and reliability.

Projects

Swachhta Setu Mobile App

01/2026 – 01/2026

- Built an educational Flutter game focused on civic awareness and waste management education.
- Implemented drag-and-drop functionality, score tracking, and game logic to provide an interactive user experience.
- Created and integrated custom UI assets and animations while optimizing rendering performance.
- Developed a multi-level gameplay system with increasing difficulty and efficient state management.

Industrial Skill Mobile App

06/2024 – 10/2024

- Built and maintained a cross-platform EdTech application for Android and iOS using Flutter.
- Implemented an interactive quiz system with real-time feedback and scoring mechanisms to support effective learning.
- Optimized content delivery and application performance for smooth navigation and faster loading of learning resources.
- Designed user-friendly learning journeys and interfaces to improve engagement and content accessibility.

General Insurance Mobile App and Website

05/2025 – 10/2025

- Developed a cross-platform Flutter application for Web, Android, and iOS using a shared codebase, reducing development and maintenance effort.
- Implemented BloC state management to manage complex customer and agency onboarding workflows while keeping the codebase organized and maintainable.
- Built responsive user interfaces that worked seamlessly across desktop and mobile devices, ensuring a consistent user experience.
- Integrated GoRouter for navigation, including deep linking, route protection, and smooth navigation across different application modules.
